1. Handle with caution and apply and use only as recommended and at recommended rates
2. Do not apply to areas occupied by unprotected humans or domestic animals and do not allow to drift to such areas.
3. Do not contaminate foodstuffs or feed and do not store with such consumables.
4. Do not contaminate streams, ponds or lake or any irrigation water or water used for livestock or domestic purposes.
5. This is a mineral oil product and can be flammable – keep away from fire, open flame and other sources of heat.

If this pest control product is to be used on a commodity that may be exported to the U.S. and you require information on acceptable residue levels in the U.S., please contact 1-866-375-4648 or www.cropro.org/.

USE WITH CAUTION

DO NOT TAKE INTERNALLY

NOTICE TO USER: This pest control product is to be used only in accordance with the directions on the label. It is an offence under the Pest Control Products Act to use this product in a way that is inconsistent with the directions on the label. The user assumes the risk to persons or property that arises from any such use of this product.

DIRECTIONS:

PREMIUM EMULSIBLE DORMANT SPRAY OIL is an emulsifiable type of mineral oil for use in control of insect pests attacking apples, peaches, pears, plums and cherries.

Mixing **PREMIUM** Emulsible Dormant Spray Oil with sulphur compounds may reduce emulsification.

Crop / To Control:

Apples, Pears / San Jose Scale, Lecanium Scale

Peaches / Overwintering, Leaf Roller (eggs)

Plums, Cherries / European Red Mite

Pear / Psylla

Rate/Time: Use 40 Litres of **PREMIUM** Dormant Spray Oil Per 1000 Litres of water or use 90 litres per hectare. Make a single application per season when trees are in the dormant stage.

To prevent damage to plant life apply only under proper conditions. Avoid spraying during or just prior to freezing weather, rain or other unsuitable weather conditions. While thorough coverage is important, avoid over spraying. Plants should be sprayed only when in a healthy condition and use efficient spraying equipment. Do not use when water temperatures are below 4.4°C. Government Agricultural Authorities upon consultation will give you specific instructions as to the use of dormant type oil sprays.

MIXING INSTRUCTIONS:

Be certain the spray tank is clean. To mix, add water to the level of the agitator shaft and with agitator in motion pour in the required amount of **PREMIUM** Emulsible Dormant Spray Oil. The mixture should turn white which indicates good emulsification. After mixing continue filling the tank and do not stop agitation until contents have been sprayed out entirely.

DO NOT USE THIS MATERIAL IF IT DOES NOT EMULSIFY

DO NOT APPLY BY AIR

FIRST AID:

Contains more than 10% petroleum distillate. In case of ingestion do not induce vomiting. In all cases obtain medical attention or contact a Poison Control Centre immediately. **IF ON SKIN:** Remove contaminated clothing and wash thoroughly with soap and water. **IF IN EYES:** Flush with water for 5-10 minutes and obtain medical attention. Take the container, label or product name and Pest Control Product Registration Number with you when seeking medical attention.

TOXICOLOGICAL INFORMATION: Use gastric lavages: avoid aspiration.

DISPOSAL: Triple or pressure-rinse the empty container. Add the rinsings to the spray mixture in the tank. Follow provincial instruction for any required additional cleaning of the container prior to its disposal. Make the empty container unsuitable for further use. Dispose of the container in accordance with provincial requirements. For information on disposal of unused, unwanted product, contact the manufacturer and the provincial regulatory agency. Contact the manufacturer and the provincial regulatory agency in case of a spill, and for clean-up of spills.
