ZEP FORMULA 60 INSECTICIDE SPRAY is a product designed especially for use in cafes, restaurants, food storage warehouses, flour mills, and meat packing plants during shut down periods. In food processing plants and food storage establishments, apply only when the plant is NOT in operation. Food should be removed or covered during treatment. All food processing surfaces should be covered or thoroughly cleaned before using. General dosage for fogging machine use is 200 mL of insecticide per 100 cu. m of space to be sprayed for control of flying insects, and 400 mL per 100 sq. m for the control of crawling insects.

NOTICE TO USER: This control product is to be used only in accordance with the directions on this label. It is an offence under the Pest Control Products Act to use a control product under unsafe conditions.

DIRECTIONS FOR USE:

FOR KILLING COCKROACHES AND ANTS: Apply as a coarse spray, using a manual compression sprayer, to point of runoff around baseboards, cracks, crevices, water pipes, and other hiding places where infestation may occur. Repeat the application when necessary. FOR SILVERFISH, CENTIPEDES, SPIDERS, FLEAS, AND TICKS: Spray directly the infested area, working spray into cracks and other hiding places. Insects should be hit directly as far as possible. Repeat application as necessary.

Carpet beetles may be controlled by spray treatment or floor coverings and all cracks in floors and along baseboards. Bedbugs in household may be controlled through repeated spraying of bed and mattress. Spray should always be directed into folds of mattress, around baseboards, walls and floors.

FOR CONTROL OF FLIES AND MOSQUITOES: Close doors and windows and spray all parts of the room using fogging machine, at the rate of 200 mL of insecticide per 100 cu. m of space. Leave room closed for 10 to 15 minutes; then sweep up and destroy the fallen insects. Repeat as necessary.

CLOTHES MOTHS may be controlled by thorough spraying of all articles to be protected, paying particular attention to seams and folds. Be certain that coverage is thorough. The interior surface of storage containers, closets, and trunks should also be thoroughly sprayed so as to kill all moth larvae that may be feeding on lint in the cracks. Unless articles treated are stored in moth-tight containers, treatment should be repeated monthly. Accessible stages of grain weevils, cadelles, grain moths, flour beetles, and grain mites may be controlled by wetting surface areas, insect hiding places, and insect runways to the point of runoff. Repeat when necessary.

CAUTION: KEEP OUT OF REACH OF CHILDREN

HARMFUL IF SWALLOWED. Do not use near open flame. Do not spray directly into exposed food. Cover or remove fishbowls and aquaria before and for approximately one hour after treatment.

Keep away from domestic animals.

FIRST AID:

In case of contact with skin, wash immediately with soap and water. If splashed in eyes, flush with water for 15 minutes. Seek medical attention immediately. If swallowed do not induce vomiting, seek medical attention immediately.
