PRESERVATIVE

For interior or exterior use above or below ground. Will not bleed through darker shades of paint; white should be avoided.

PREPARATION: Materials to be treated should be clean and dry so that full penetration is achieved. Wood should be free of paint, varnish or other coatings.

APPLICATIONS: Use exactly as received - do not dilute. Apply to brush, dip or spray generously until material is saturated. One coat is usually sufficient but two coats are best if high decay hazard exists. Allow at least 8 hours drying between coats.

USE OF DIP METHOD: For Wood: Immerse completely for 2 to 4 minutes per cm of thickness. Dressed lumber will require longer, usually 6 to 12 minutes per cm of thickness. For Rope: Immerse completely for as long as required to achieve saturation. This will vary according to the size of rope. Allow to dry for 24 hours before using. For Canvas: Saturate the fabric, drain and allow to dry 24 hours before using. Do not use on Rubberized materials. COVERAGE: Approximately 4 m² per litre for wood depending on porosity. Rope and canvas will vary according to size and weight.

PRECAUTION: Harmful if swallowed or inhaled. Avoid skin contact. Use only under well ventilated conditions because vapour is harmful. Do not allow food or animals to come in contact with freshly treated material. Harmful to plant life when wet; allow to dry thoroughly before permitting contact.

KEEP AWAY FROM OPEN FLAME OR SPARK

FIRST AID INSTRUCTIONS: Contains petroleum distillate. If swallowed, do induce vomiting. Call physician immediately. If patient is unconscious, give him air. Spatters on the skin should be removed promptly by washing with soap and water and contact a physician.
