A highly refined Creosote Oil which helps to prolong the life of wood by preventing the growth of moulds and fungi which can cause rot and decay. It strongly deters many types of insects. Creosote may be applied by brush, dipping or soaking.

Best results are achieved when applied to seasoned, dry lumber so that maximum penetration is obtained. In areas of extreme decay hazards such as wood which is in continuous contact with the earth and fence posts at the ground line, two or more applications of the preservative are desirable.

#### PRECAUTIONS

Keep away from children.  
Do not use on surfaces which come into close contact with the body because Creosote may irritate sensitive skin. Protect the eyes and exposed skin. during application. Creosote is phytotoxic to plants and should not be used near them.

#### FIRST AID INSTRUCTION

Toxic if swallowed do not induce vomiting. Call a physician immediately. If patient is unconscious, give him air. Splatters on the skin should be removed promptly by washing with paint thinners, followed by mild soap and water. For the eyes, flush with clean water and contact a physician.
