AQUAPOOL

CHLORINATING LIQUID

CONTROLS BACTERIA AND ALGAE IN SWIMMING POOL WATERS

GUARANTEE: Sodium Hypochlorite 10.8%
Available Chlorine Content 10.3%

3.6L (128 oz fl)

WARNING

CORROSIVE

READ THE LABEL BEFORE USING

DOMESTIC REG. NO. 13751 P.C.P. ACT

Canadian Miraclean Products Ltd.

Richmond, British Columbia V7A 4X6

Use Aqua Pool to clear and restore sparkle; kill and control Bacteria, viruses, and algae; disinfect; deodorize; and eliminate organic matter from you swimming pool.

PRECAUTIONS: Keep out of reach of children. Dangerous gas formed when mixed with acid. Do not mix with any other chemical. Avoid contact with skin and eyes. Harmful if swallowed. Keep container closed and store in a cool dry location away from heat or sunlight. Rinse container thoroughly before discarding. Do not reuse container. To dispose of chemicals, flush into sewer with large quantities of water.

FIRST AID: If splashed in eyes or on skin, flush thoroughly with water for 15 minutes. For eye contact, get medical attention. If swallowed, drink one glass of milk or water. Call physician immediately.

FACTS ABOUT pH: pH is a numerical rating. 0 to 14, indicating the relative acidity, or alkalinity of a solution. A solution with pH of 7 is neutral, above 7 is alkaline, below 7 is acid. pH of swimming pool water should be between 7.2-7.8 i.e. slightly alkaline.

REASONS FOR pH CONTROL:

- . Reduces eye irritation

- . To aid in coagulation of impurities which cause cloudiness
- . Prevent corrosion of pool ladders, piping, etc.
- . For economy and efficiency:
 - (A) Up to 10 times the amount of chlorine is needed at pH 8.5 as is required at 7.5 to have the same sanitizing properties.
 - (B) Below pH 7.0, the chlorine tends to dissipate or go out of solution. This creates disagreeable odor above water surface.

DIRECTIONS FOR USE

1. Maintain recommended daily levels as determined by testing kit.

Free available chlorine:	1.0 - 3.0 ppm	pH:
	7.2 - 7.8	ppm
Total Alkalinity:	100 - 120	ppm
Calcium Hardness:	200 - 300	ppm

2. Initially superchlorinate pool water by adding to the pool 1L of Aqua Pool per 10,000L of pool water. For best results superchlorinate at dusk.
3. Chlorinate daily to maintain proper chlorine residual with 250mL of Aqua Pool per 10,000 litres of pool water, or as needed. Note: Hot weather, heavy pool usage, and rain may require higher usage rates to maintain proper chlorine residuals.
4. Superchlorinate weekly with 1L per 10,000 litres when average daily temperature is 25'C - 32'C. Otherwise, superchlorinate every other week.
5. For visible algae, superchlorinate using 2L of Aqua Pool per 10,000L of pool water. Heavy algae infestation may require dosages up to 3L per 10,000L. Vacuum pool when dead algae settles.
6. For wading pools, chlorinate daily to maintain a chlorine residual of 3-5 ppm by adding 45.0 mL of Aqua Pool per 1000L of pool water, or as needed.

Note: For outdoor pools, chlorine residuals can be protected from destruction by sun's rays by addition of stabilizer (cyanuric acid).
