K-START STABILIZES AND SUPERCHLORINATES IN ONE EASY APPLICATION!

The pool only needs to be stabilized once. When used as directed. Stabilized Granular Chlorine or Concentrated Tablets will automatically replenish normal stabilizer loss from your pool. If unstabilized chlorine is used, you should consult your Dealer before adding more stabilizer.

For newly-filled, completely refilled or unstabilized pools already operating:

1. If necessary, adjust pH to between 7.2 - 7.6.
2. Use 375 grams Conditioner for each 10,000 litres of pool water. Before adding to pool, dissolve first with water in a clean, dry plastic container and then pour into water at several points around the sides of the pool.
3. Allow the filter to recirculate the water for at least 4 to 6 hours.
4. Allow chlorine residual to return to 3.0 ppm before using pool.

PRECAUTIONS: When pre-mixing, use clean plastic container only. Fill container with pool water before adding chlorine. Never add water to dry chlorine. DANGEROUS GAS FORMED WHEN MIXED WITH ACID. NEVER MIX WITH ANY OTHER CHEMICAL OR MATERIAL.

Moisture contamination may liberate irritating and hazardous chlorine gas. When not in use, keep container tightly closed and store in a cool, dry area.

Causes severe eye irritation - avoid contact with eyes and skin.

Harmful if swallowed.

FIRST AID: If splashed in eyes or on skin, flush thoroughly with water for 15 minutes. For eye contact, get medical attention. If swallowed, drink one glass of milk or water. Call a Physician IMMEDIATELY.

KEEP OUT OF REACH OF CHILDREN AND PETS.

DISPOSAL: This product is toxic to fish. Treated pool water should not be discharged into streams, ponds, lakes or any storm sewers. Do not re-use container - rinse thoroughly with water before disposal.
