GENERAL INFORMATION:

The Control Pet Care System Mousse is a contact and residual insecticidal foam which kills adult cat fleas, dog fleas, American dog and brown dog ticks. Effectively breaks the flea life cycle and prevents the growth of pre-adult stages of the flea. Its unique combination of ingredients kills adult fleas for 7 to 10 days and keeps flea eggs from hatching for up to 45 days.

DIRECTIONS FOR USE: Shake can well before using. Hold can about 2 cm above pet's back and spray foam from the pet's head to tail. Do not spray face, eyes or genitals. Rub the foam thoroughly into the pet's coat with finger tips. Apply second strip of foam if coverage is incomplete and rub into pet's coat. Wipe off any excess with a dry cloth and then brush. Using this technique, the application of 2 to 4 grams of Control Pet Care System Mousse per kilogram of body weight (i.e. 1 to 2 strips of foam down the pet's body length) will provide effective long-term flea control.

Repeat only as necessary. Given the residual control afforded by Control Pet Care System Mousse, the application of this product once per month should be adequate. In unusual circumstances, where there is a heavy external source of adult fleas re-infesting the animal, re-treatment may be increased to once per week. For effective flea and tick control, treatment of the pet should be combined with the sanitation of any area used by the pet. Vacuum floors, carpets, and furniture (discard vacuum bag after use) and wash the pet's bedding, living quarters, and surrounding areas. If pest problems persist, an insecticidal premise treatment may be required.

PRECAUTIONS: KEEP OUT OF REACH OF CHILDREN. Harmful if swallowed. Avoid contact with eyes. After using, wash hands with soap and water. Consult veterinarian before using on pregnant animals, sick animals or animals under drug or other pesticide treatment. Do not use on nursing animals or animals under 8 weeks of age. Discontinue use if adverse effects are observed or if dermal or nasal irritation develops.

Although the Control Pet Care System Mousse is specifically formulated for these animals, some particularly sensitive cats may exhibit temporary and non-harmful salivation when exposed to products containing pyrethrin. In cases of known sensitivity, the use of the lower treatment rates is recommended. If the condition persists bathe the animal and consult your veterinarian.

FIRST AID: IF SWALLOWED, obtain medical attention immediately. IF IN EYES, flush with plenty of water, get medical attention if

irritation persists. IF ON SKIN, wash affected area with soap and water.

STORAGE AND DISPOSAL: Contents under pressure. Wrap empty container and place in garbage. Keep away from heat or open flame. Do not puncture container. Do not expose to temperatures over 50 deg C.
