DIRECTIONS: Hold pet securely. Cleanse ear thoroughly. Fill outer ear canal half full with Rabbit Ear Miticide. Massage base of the ear to distribute solution into ear wax. Repeat every other day until condition is relieved. Symptoms should improve in 4 to 6 days. Continue treatment for 12 days. Since ear mites occasionally are found on other parts of the body, reinfestation may occur unless a suitable sponge dip or other full-body treatment is used.

INDICATIONS: Ear mites normally cause a dry, dark brown waxy exudate with crusts in the ears of rabbits, dogs and cats. Mites are easily observed by placing some of the ear wax on a dark surface and watching closely for moving white specks. Do not injure the delicate tissue of the ear. Inflamed, watery or blocked ear canals indicate a more serious condition which requires special treatment.

PRECAUTIONS: KEEP OUT OF REACH OF CHILDREN.
HAZARDS TO HUMANS AND DOMESTIC ANIMALS.

Harmful if swallowed. If swallowed drink one or two glasses of water and induce vomiting by touching the back of the throat with finger. Repeat until vomit fluid is clear. Do not induce vomiting or give anything by mouth to an unconscious person. Call a physician or Poison Control Center immediately. If on skin remove contaminated clothing and wash affected areas with soap and water. Avoid contact with eyes. If in eyes, flush eyes with plenty of water. Consult a physician if irritation persists (humans). Avoid contamination of foodstuffs or utensils. For animals, discontinue use if irritation develops.

STORAGE AND DISPOSAL

Do not contaminate water, food, or feed by Storage or Disposal. STORAGE: Keep away from heat. CONTAINER DISPOSAL: Do not reuse empty container, wrap and put in garbage collection.
