DIRECTIONS FOR USE

COOLING TOWER SYSTEMS

Prior to use in water cooling towers, systems should be cleaned to remove organic, inorganic and microbiological deposits. An initial slug addition of 420 to 1050 Ml per 10,000 liters of water should then be added to the sump of the cooling water

towers. Repeat the initial dosage until control is evident. Subsequent slug additions of 120 to 1050 mL per 10,000 liters of water should be added every 2 to 5 days or as needed. The frequency of addition will depend on the relative amount of bleedoff and the severity of the microbiological problem.

#### INDUSTRIAL AIR WASHING SYSTEMS

Prior to use in air washers, systems should be cleaned to remove organic, inorganic and microbiological deposits. An initial slug addition of 150 to 240 mL per 1,000 liters of water should then be added to the sump or the water collector trays. Repeat the initial dosage until control is evident. Subsequent slug additions of 105 to 240 mL per 1,000 liters of water should be added every 1 to 5 days or as needed. The frequency of addition will depend on the relative amount of bleedoff and the severity of the microbiological problem. For use only in systems equipped with effective mist eliminating components.
