BETASAN®

Crabgrass Preventer

Attach & Spray

GUARANTEE: BENSULIDE.....145 grams per litre

READ THE LABEL BEFORE USING

KEEP OUT OF REACH OF CHILDREN

BETASAN® Crabgrass Preventer is a pre-emergent herbicide for use on established turf to control crabgrass. BETASAN® Crabgrass Preventer will not control established weeds.

PRECAUTIONS

This product contains a petroleum distillate at ___% which is moderately to high to aquatic organisms. Avoid contamination of aquatic systems during application. Do not contaminate these systems through direct application, disposal of waste or cleaning equipment.

Harmful if swallowed. Avoid contact with skin and eyes. Avoid breathing spray mist. Wash thoroughly after use. In case of accident, obtain medical attention. Toxic to fish. Do not contaminate any body of water by direct application, cleaning of equipment, or disposal of wastes and container. When treating an area near a body of water leave a buffer zone of untreated ground.

DO NOT ALLOW CHILDREN OR PETS ON THE LAWN UNTIL THE PRODUCT HAS BEEN THOROUGHLY WATERED IN AND IS COMPLETELY DRY.

RESEEDING

Any material that provides effective control of annual grasses may affect new lawn grass seedlings which germinate after treatment. Proper fertilization and watering will encourage the existing turf grass to fill in the thin or bare spots formerly occupied by crabgrass. Do not reseed within 1 year after application. Renovate the area to be reseeded by raking thoroughly to scarify the soil surface. When practical, mix peat in with the soil to provide an optimum seed bed. If reseeded must be done sooner than 1 year after treatment, remove top 5 centimetres of soil and replace with clean, untreated soil.

FIRST AID

Ingestion may produce symptoms. Do not induce vomiting, contains petroleum distillate, obtain medical attention immediately or contact a poison control centre. Absorption through the skin or inhalation of quantities sufficient to product poisoning is unlikely. If product gets on skin, wash thoroughly. If in eyes, flush with water and obtain medical aid. Take container, label or product name and Pest Control Product Registration Number with you when seeking medical attention.

DIRECTIONS

READ LABEL BEFORE USE. KEEP OUT OF REACH OF CHILDREN. Remove sprayer nozzle from the container. Attach hose to sprayer nozzle. Attach nozzle to the container and turn the regulator to the OFF position. The OFF setting is when the regulator is turned at right angles to the nozzle. Turn on the water. Facing the lawn, turn the regulator to the ON position. The ON position is when the regulator is in line with the nozzle. Apply the spray solution evenly over the surface of the lawn. One container (1 litre) will treat 100 m². DO NOT ALLOW SPRAY TO DRIFT ONTO DESIRABLE TREES AND SHRUBS, VEGETABLE GARDENS, OR FLOWER BEDS. When spraying is completed turn regulator to the OFF position, turn off water and disconnect.

For control of crabgrass, apply BETASAN® Crabgrass Preventer in the late fall or early spring before the crabgrass seed germinates. Spring application should be made before May 1, in most areas. For spring or fall applications ensure that all leaves, dead grass, and other debris is removed before application and no raking, dethatching or other soil disturbances occur after application. If fall application (October or November) is made, do not rake the lawn or disturb the soil in the lawn in any way the following spring. Do not overlap areas already treated. Do not apply peat moss to lawn before treating.

After application, thoroughly water the lawn to move the product into the soil. Apply at least 1 to 2 centimetres of water evenly over the treated area.

BETASAN® Crabgrass Preventer should only be applied to well established lawns. Do not apply to grass less than 3 months

old. Use on mineral soil only. Do not reseed in treated areas for 1 year after application. (Should reseed be desired, see below for details.)
