

Evaluation Report for Category B, Subcategory 3.1 Application

Application Number: 2026-0454
Application: Application rate decrease
Applicant: ADAMA Agricultural Solutions Canada Ltd.
Product: Folpan 80 WDG
Registration Number: 27733
Active ingredient(s) (a.i.): folpet
PMRA Document Number: 3869583

Purpose of Application

The purpose of this application was to reduce the lower application rate registered to control scab on apple and crabapple on the Folpan 80 WDG label from 3.0 kg/ha to 1.875 kg/ha.

Chemistry, Health and Environmental Assessments

A chemistry assessment was not required since there was no change to product chemistry. Health and environmental assessments were not required since the change to the use pattern, a reduction of the lowest registered application rate, does not affect the risk assessments conducted when the subject uses were initially registered.

Value Assessment

The results of three field efficacy trials conducted in Ontario in 2024 and 2025 were reviewed to support the rate amendment. The results show that there is no significant difference in efficacy against apple scab between 3.0 kg/ha of Folpan 80 WDG and 1.875 kg/ha on apple. The reduced rate also demonstrated equivalent efficacy compared to registered commercial standards. A scientific rationale supported the extrapolation of the rate amendment to crabapple.

The trial results suggested there is no economic benefit in applying 3.0 kg/ha of Folpan 80 WDG when disease pressure is low to moderate. Application at 1.875 kg/ha will control apple scab under lower levels of disease and can reduce costs to growers by using less product.

Conclusion

Health Canada has completed an assessment of the information provided, and has found the information acceptable to support the reduction of the low rate of Folpan 80 WDG for apple scab control from 3.0 kg/ha to 1.875 kg/ha.
