

Evaluation Report for Category B, Subcategories 3.10, 3.2 Application

Application Number: 2023-7258
Application: Changes to Product Labels – Tank Mixes and Application Timing
Applicant: Corteva Agriscience Canada Company
Product: FirstRate Herbicide
Registration Number: 33619
Active ingredient (a.i.): Cloransulam-methyl
PMRA Document Number: 3692411

Purpose of Application

The purpose of this application was to amend the product label of FirstRate Herbicide.

Chemistry, Health and Environmental Assessments

Chemistry, health and environmental assessments were not required for this application.

Value Assessment

Clarification of the pre-emergent application timing for FirstRate Herbicide to include pre-plant surface and pre-plant incorporated application timings in addition to pre-emergence applications provides greater clarity to users about the registered use pattern and expands the utility of the product whether it is used alone or in combination with other herbicides. Further, the addition of tank mix partners to the FirstRate Herbicide label provides users with options for expanded ‘pre-’ weed control in soybean grown in eastern Canada.

Value information submitted for review consisted of a scientific rationale with support from published data and use history information. Based on the weight of available evidence, including pre-plant surface and pre-plant incorporated applications on the FirstRate Herbicide label, in addition to adding tank mix partners for pre-plant and pre-emergence applications in soybean, have been determined to have acceptable value.

Conclusion

The Pest Management Regulatory Agency has completed an assessment of the information provided and has found the information acceptable to support the amendments to the product label of FirstRate Herbicide.
