Date decision made public	07-MAR-2024 02:00:00
Decision on application	-
Decision on reevaluation	-

Scientific basis description	In the attached documents I present scientific concerns I have with the decision to continue predacidal use of Compound 1080. As Canada strives to meet biodiversity commitments, we must transition to more responsible, and ethical, wildlife management and farming practices; (see Kunming-Montreal Global Biodiversity Framework Target #10). As described in the attached Notice of Objection, according to the best available records, between 2010 ¿ 2021, nearly half (48%) of the Compound 1080 bait sites administered by Alberta Fish and Wildlife Officers were not baited in accordance with the label directions, with ~796 tablets (5mg/tab) of Compound 1080 used to kill each wolf that was located and recovered. During this same period, ~193 tablets (5mg/tab) were used to kill each located and recorded coyote, with the vast majority of these placed by landowners. Hundreds to thousands of Compound 1080 tablets remain unaccounted for on the landscape each year. In the attached documents I present a scientific rationale with evidence which has not been diligently considered, although it is relevant. There is no clear scientific evidence that killing wolves and/or coyotes is an effective way to reduce future livestock losses, improve human safety, or increase populations for species at risk. The empirical data is contradictory to the continued use of Compound 1080, be it seen through a lens of ecology, conservation biology, animal welfare, or conflict reduction. With this Notice of Objection, I formally request that all uses of Compound 1080 be cancelled and discontinued within a 6-month phase-out period.
Active ingredients	Sodium monofluoroacetate (Compound 1080) Registration No. 18300
Product information	Active_Ingredient

Pest Management Regulatory Agency
